

Metro Houston Population Forecast

Projections to 2050

Prepared by the Greater Houston Partnership Research Department
Data from Texas Demographic Center

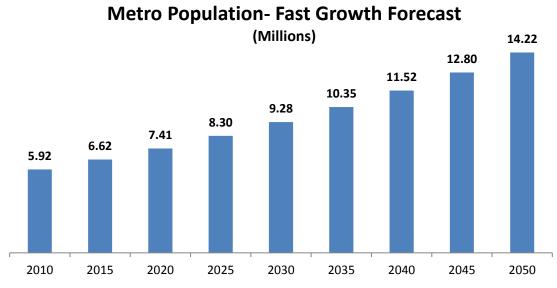

www.houston.org

April 2017

Population Forecast - Houston-The Woodlands-Sugar Land, TX MSA

Fast Growth Scenario

In the fast growth scenario, the Houston metro area will add 8.3 million residents between 2010 and 2050.

Source: Texas Demographic Center

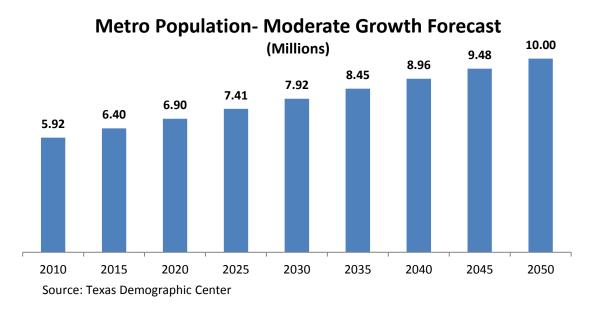

- Under the fast growth scenario, the Houston region will add an average of two million residents per decade over the next 40 years.
- Population growth will come from the natural increase (births minus deaths) and from "net inmigration" (people moving into the region minus people moving out).
- Texas Demographic Center's fast growth scenario assumes net inmigration from now through 2050 to be equal to that experienced from 2000 to 2010. The scenario is typically used for short-range projections. For more information, please refer to the Texas Demographic Center's <u>Population Projections Methodology</u>.

Population Forecast - Houston-The Woodlands-Sugar Land, TX MSA

Moderate Growth Scenario

In the moderate growth scenario, the Houston metro area will add 4.1 million residents between 2010 and 2050.

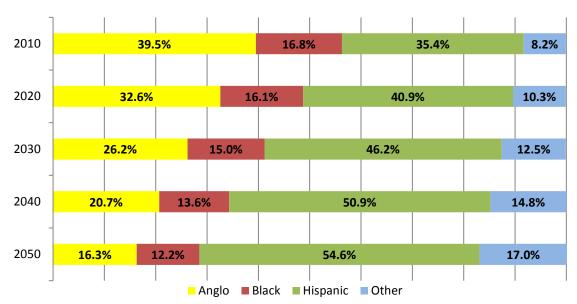

- Under the moderate growth scenario, the Houston region will add approximately one million residents per decade over the next 40 years.
- Population growth will come from the natural increase (births minus deaths) and from "net inmigration" (people moving into the region minus people moving out).
- Texas Demographic Center's moderate growth scenario assumes net inmigration from now through 2050 to be half that experienced from 2000 to 2010. The scenario is typically used for long-range projections. For more information, please refer to the Texas Demographic Center's <u>Population Projections Methodology</u>.

Fast Growth Scenario

Over the next four decades, Houston's racial and ethnic composition will shift dramatically.

Note: Other includes Asian, Native American and residents of more than one race.

- In the Texas Demographic Center's *Fast Growth Scenario*, the Anglo and Hispanic populations are equally balanced during the early years of the forecast.
- Over time, however, Anglos will comprise a slightly smaller number of Houston area residents and a smaller share of the overall population.
- Houston's black population will continue to grow but not enough to maintain its current share of the metro population.
- By 2038, Hispanics could outnumber all other ethnic groups combined.
- By 2046, the Hispanic population of Houston could exceed the total population of Houston today.
- Texas Demographic Center's fast growth scenario assumes net inmigration from now through 2050 to be equal to that experienced from 2000 to 2010. The scenario is typically used for short-range projections. For more information, please refer to the Texas Demographic Center's <u>Population Projections Methodology</u>.

Moderate Growth Scenario

Over the next four decades, Houston's racial and ethnic composition will shift dramatically.

Note: Other includes Asian, Native American, and residents of more than one race.

- In the Texas Demographic Center's *Moderate Growth Scenario*, the Anglo and Hispanic populations are equally balanced during the early years of the forecast.
- In the *Moderate Growth Scenario*, Houston's Anglo population reaches a peak of 2.405 million in 2024 and then begins to decline into 2050. Anglo's share of overall population declines for the entire forecast period.
- Houston's black population will continue to grow, but its share of population will decline.
 However, the decline in this group's share of the metro population is less dramatic than forecasted in the Fast Growth Scenario.
- By 2045, Hispanics will outnumber all other ethnic groups combined.
- Texas Demographic Center's moderate growth scenario assumes net inmigration from now through 2050 to be half that experienced from 2000 to 2010. The scenario is typically used for long-range projections. For more information, please refer to the Texas Demographic Center's <u>Population Projections Methodology</u>.

Fast Growth Scenario

Over the next four decades, Houston's population will age significantly.

- In the Texas Demographic Center's *Fast Growth Scenario*, the share of Houston's population 18 and younger declines over the next 40 years.
- The number of Houston's population ages 19-24, the age when most residents enter the workforce, continues to grow, but this cohort's share of total population declines slightly over time.
- The number of residents ages 25-64, what most consider their prime working years, grows by approximately 4.2 million. This cohort's share of the population declines slightly over time.
- The number of residents over the age of 65 triples, from approximately 730,300 today to approximately 2.5 million in 2050.

Moderate Growth Scenario

Over the next four decades, Houston's population will age significantly.

- In the Texas Demographic Center's *Moderate Growth Scenario*, the share of Houston's population 18 and younger declines over the next 40 years.
- The share of Houston's population ages 19-24, the age when most residents enter the workforce, continues to grow, but this cohort's share of total population declines slightly over time.
- The number of residents ages 25-64, what most consider their prime working years, grows by approximately 1.8 million. This cohort's share of the population declines slightly over time.
- The number of residents over the age of 65 triples, from approximately 723,000 today to approximately 2.0 million in 2050.
- By 2050, there will be almost as many residents over the age of 65 as there will be under the age of 18.

About the Data

The <u>Texas Demographic Center</u> serves as the focal point for the distribution of census data in Texas and disseminates population estimates and projections for all 254 counties in the state. The Texas Governor's Office, Texas Legislative Budget Board, Comptroller's Office, Texas Department of Transportation and the Texas Department of State Health Services rely on the center's *Texas Population Estimates and Projections Program* to plan for and deliver services to the residents of Texas. The Partnership has extracted data from the program for the nine counties that comprise the Houston metro area and includes that data in this report.

To prepare its projections, the state data center examines patterns of births, deaths, and net migration (the difference between residents moving in and residents moving out) in each of the state's 254 counties. It then forecasts populations by age, sex, race and ethnicity for four groups: Non-Hispanic White Alone, Non-Hispanic Black or African American Alone, Hispanic of all Races, and Other Non-Hispanic. The first three groups are more commonly referred to as Anglo, Black and Hispanic. The Other Non-Hispanic group includes Asians and Persons of More Than One Race. The center does not forecast growth in the Asian population because of the small size of those populations in most Texas counties (though that's not the case for Houston). The center does not forecast growth in populations of More Than One Race because there is a lack historical data on fertility, mortality and migration in this group.

The center uses three migration scenarios in its forecasts. The Zero Migration Scenario assumes that inmigration and outmigration are equal thus growth only results from the natural increase, *i.e.*, the difference between births and deaths. The One-Half Migration Scenario assumes net migration occurs at half the rate at which it occurred from 2000 to 2010. The center refers to this as the "0.5 Scenario." In this document it's referred to as the "Moderate Growth Scenario." The 2000-2010 Migration Scenario assumes that trends in age, sex, race/ethnicity and migration of the past decade are repeated in coming years. In this document this is referred to as the "Fast Growth Scenario." The state data center suggests that the moderate growth scenario is most appropriate for long-range planning while the fast growth scenario is appropriate for the next five to ten years.
